3M EH-Series Tapes combine unique air release features with a special adhesive that resists edge lifting on cylinder Diameters as small as 2". EH-Series Tapes features crosshatched micro-channels allowing air to bleed between the plate, tape and cylinder. An exclusive 3M adhesive maintains tight contact between tape and plate to dramatically reduce edge lifting, yet removes easily without plate damage. Choose From a range of constructions for solids, halftones or combination solids and dots. Best of all, these tapes are brought to you by Quality Discount, a 3M Master Distributor.

- E** - Air Release Medium Plate Side Adhesion
- EH** - Air Release High Plate Side adhesion
- S** - High Sleeve Side Adhesion for Urethane Sleeves
- M** - Modified Side Adhesion
- DL** - Double Liner
- R** - For Rubber Plates
- K** - High Sleeve Side Adhesion for Composite Sleeves

3M™ Traction Tape 5401

traction

friction

non-stick

Enhanced friction to help improve web processing

3M™ Traction Tape 5401 enhances friction on web rollers to help maintain constant traction and tension for the web material from start-up through wind-up. The result—improved processing in web printing, converting, and other web handling.

- Silicone surface not only enhances friction, but also provides non-stick properties that resist build-up of inks and adhesive
- Durable fiberglass-reinforced construction wraps and conforms easily in whatever pattern you need, and performs reliably
- Silicone pressure sensitive adhesive grips on contact, holds securely to most dry, clean rollers, and removes cleanly when time for replacement; clean-up is minimal
- Service temperature up to 300°F (150°C) meets requirements of most web processing conditions

TESA TAPES - we are a master distributor of tesa!!

Part #	Description
52020	The industry's most advanced 20 mil foam tape for combination printing.
52060	The 60 mil closed cell PE foam tape is designed to reduce plate vibration and foam fatigue during long print runs.
52338	Eliminates pin-holing, and with an embossed PP liner, minimizes air entrapment when positioning both plate and tape
52500	High quality double-coated 20 mil closed cell PE foam tape for both rubber and photopolymer printing plates.
52310	4 mil transparent film tape for mounting photopolymer plates on printing cylinders or on Mylar sheets
52350	Engineered to hold both rubber and photopolymer printing plates, this 20 mil vinyl is the product of choice for solid printing applications
52506	Combination of closed cell foam and stabilizing film promotes the release of air bubbles & provides consistent thickness across the web.
50658	Provides the utmost in security and reliability when it comes to the standard splicing applications
52330	A strong bonding, highly flexible 15 mil cloth tape for bonding rubber plates for solid print jobs.
52380	This 15 mil, low density closed cell PE foam tape, perfect for the highest precision in printing screen work.
52382	A high performance 15 mil closed cell PE foam plate mounting tape, specifically engineered to excel in combination print work.

CUSHION MOUNT TAPE

HARLEY	cushion plate mounting tape. green in color. slit to size at no charge. 15 or 20 mil, 25 yards
SUPERCELL	cushion plate mounting tape - available in 15 mil & 20 mil 18" or 37" wide. 15 or 20 mil, 25 yards.
LOHMANN	a cushion mounting tape that has close tolerances. slit to size at no charge. 15 mil, blue s/b, 25 yards
ECLIPSE	another cushion mounting tape sweeping the market. also 18" x 5 yard rolls available.
R/BAK SA2000	available in 3 levels of compressibility, soft, general purpose, firm, 15 mil or 20 mil x 18" lengths x 25 yards
AGI	available in 3 levels of compressibility, soft, general purpose, firm, 15 mil or 20 mil 18" lengths.
